EDUCATION

University of Lucknow — Lucknow, India

Sep 2022 – Jun 2025

Bachelor of Computer Application (BCA), 72%

TECHNICAL SKILLS

- Data Analysis & Visualization: SQL (MySQL), Advanced Excel (Pivot Tables, VLOOKUP, Power Query), Power BI, Tableau, Python (Pandas, NumPy, Matplotlib, Seaborn)
- Analytics Methods: Exploratory Data Analysis (EDA), Data Cleaning & Validation, Data Quality Checks, ETL Pipelines, Statistical Analysis, Feature Engineering
- Generative AI: Prompt Engineering, LLM-assisted Data Analysis & Reporting Automation, GenAI Workflow Integration, Retrieval-Augmented Generation (RAG) fundamentals, GitHub Copilot
- Reporting & Tools: MIS-style Reporting, Dashboards, Jupyter Notebook, Git, GitHub, REST API Integration
- Programming (secondary): Java, C, JavaScript, ReactJS, NodeJS, Express.js, MongoDB

PROJECTS

House Price Prediction ([GitHub Link](#))

Aug-2026

Python, Pandas, NumPy, Scikit-learn, Matplotlib/Seaborn, Jupyter Notebook

- Built a regression pipeline to predict residential house sale prices from structured property data (square footage, bedrooms/bathrooms, location, and other attributes).
- Performed data cleaning and exploratory data analysis, using correlation heatmaps and scatter/distribution plots to identify the features most predictive of sale price.
- Trained and benchmarked multiple regression models (Linear Regression, Ridge, Lasso, and Gradient Boosting), evaluating R-squared and error metrics to select the best-performing model.

Sensor Fault Detection using Machine Learning ([GitHub Link](#))

Sep-2026

Python, Scikit-learn, Pandas, NumPy, Matplotlib/Seaborn, Jupyter Notebook

- Built a binary classification pipeline to automatically flag faulty industrial/IoT sensor readings from time-series sensor data, replacing a slower manual inspection process.
- Performed data preprocessing and cleaning, including missing-value imputation and outlier handling, followed by exploratory data analysis to surface key fault-indicating features.
- Trained and compared multiple classification models (Logistic Regression, Random Forest, Decision Tree), evaluating performance on accuracy, precision, and recall to select the strongest fault-detection model.

EXPERIENCE

Data & Reporting Analyst Intern — Bluestocks Fintech, Lucknow, India

Apr 2025 – Jun 2025

- Improved data reliability across BroEx's News Feed and Property Search modules, cutting data inconsistency incidents by ~25%, by designing and validating 10+ backend REST APIs with built-in data quality checks.
- Reduced page load time by 30% for the BroEx user feed, as measured by frontend performance benchmarks, by auditing and rebuilding key ReactJS components for responsiveness.
- Streamlined task reporting and tracking for 5+ employee roles by building an internal admin panel with role-based access control, reducing manual status-update overhead across teams.

Data Analytics Virtual Job Simulation — Deloitte Australia (Remote)

Jun 2025

- Delivered structured business insights from real-world case datasets by applying data interpretation, exploratory analysis, and reporting frameworks aligned with Deloitte's analytics methodology.

GenAI-Powered Data Analytics Virtual Job Simulation — Tata Group (Remote)

Aug 2025

- Cut manual analysis time on enterprise datasets by applying generative AI tools to automate reporting workflows, producing insight-ready visual dashboards aligned with enterprise analytics standards.

CERTIFICATIONS

ReactJS & Redux (Udemy) • NodeJS with Express & MongoDB (Udemy) • Python for Data Science (XIE) • Command Line in Linux (Coursera) • Microsoft AI Classroom (Microsoft) • MongoDB Basics • SQL • Java • 5 Stars in C++ & SQL (HackerRank)
